## Fitted once Fitted for Life

### SWR Drainage System

Soil, waste & rain water (S.W.R.) uPVC drainage systems are the ideal solution for drainage & sewerage applications, owing to its superior properties compared to conventional drainage system.

### RANGE

The pipes are available in three ranges namely Milan power & in diameters ranging from 40mm to 160mm & confirm to relevant IS international specifications.

### APPLICATION

Milan power SWR uPVC drainage systems are set of pipes & fittings used in excreta, waste water & drainage lines of residential & commercial complexes. type B Pipes are high pressure pipes recommended for hi-rise buildings. They are gently used for :

#### Soil / Waste

lines are connected to various soiled water generation points(such as lavatories, basins, commodes, bathrooms, kitchen sinks etc.) for smooth transportation of soluble & in soluble waste along with water to main drain lines.

#### Rain

Lines connected to gulleys, gutters on rooftop for drainage to excess rain water

### Features :

- Light Weight
- Flexibility In Usage
- High Flow Rate
- Weather Resistant
- Aesthetic Superiority
- Performance
- High Impact Strength
- Chemical Resistance
- Non Flammable
- Corrosion Resistant
- Rodent Repellent

### Advantage of Milan Power

the **MILAN POWER** range consists of pipe & fittings manufactured as per is: 13592 respectively & usages co-moulded rings, manufactured using advanced technology to ensure a leak-proof, long-lasting system that performs flawlessly, even under high flow rates.

The foll. are its advantages.

- Manufactured in our state-of-the-art ISO certified production facility using advanced co-moulding technology.
- A combination of reinforced plastic along with soft rubber is used during manufacturing.
- Easy to install and fits perfectly in the groove to provide a 100% leak proof joint that easily withstands high pressure.
- Allow thermal expansion & contraction.
- Accurate and exact dimensions.
- Doesn't require any adhesive which saves time and cost.
- Just a simple push required to create a leak proof joint.
- High flow rates & no choking.
- Water absorption is very low and has a long lasting life.
